Arrow®

Cannon® II Plus

Retrograde-tunneled, Tip-first Chronic Hemodialysis Catheter

Arrow® Cannon® II Plus

Optimal Placement, Minimal Risk.

The Tip-first Advantage

Start at the Heart™ with Arrow Cannon II Plus Catheter. It's engineered specifically for retrograde tunneling. This technique improves your ability to place the catheter (especially the tip, cuff, and hub) in the ideal position, to achieve the best possible performance and patient outcome^{2,4}. Once in place, Arrow Cannon II Plus Catheter is designed for optimal flow and easy maintenance, with minimal complications.²

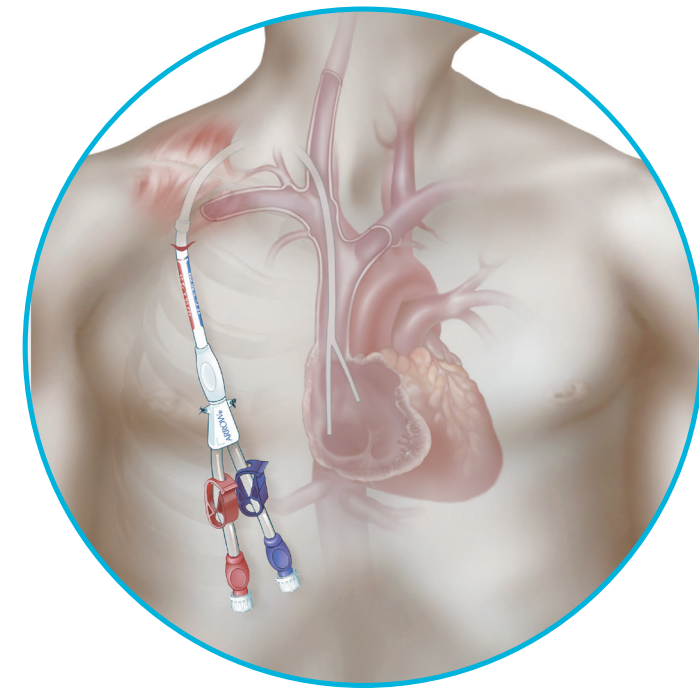

V-tip Design and Catheter Tip Orientation
Minimizes risk of recirculation when placed in the right atrium²

Alcohol-Compatible Construction
Compatible with a broad spectrum of antiseptic agents, including alcohol and iodine¹

Arrow® Smartseal®
Featured in our kits—hemostatic peelable dialysis sheath

Replaceable Hub Connection
Enables easy extension line replacement without removing indwelling catheter

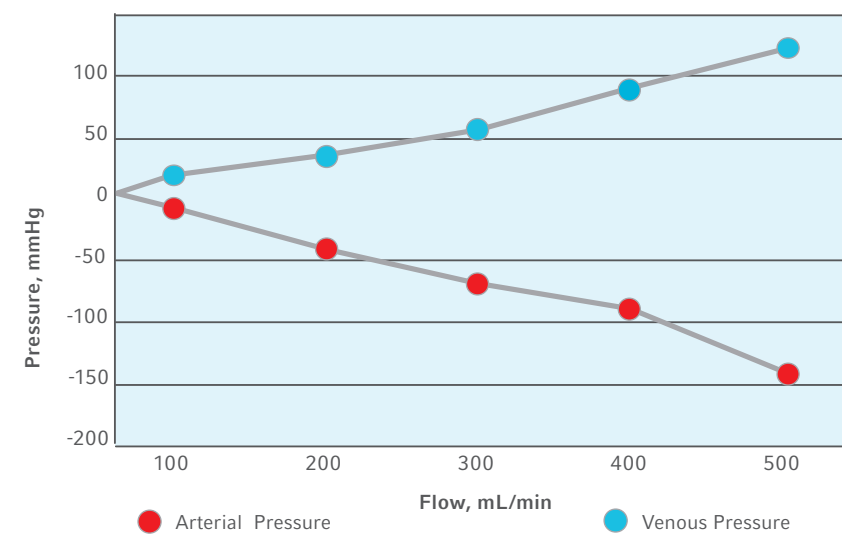

Benefits of Retrograde Tunneling Technique

- Facilitates fast, precise tip placement within the right atrium³
- Helps create a smooth, contoured tunnel tract that
 - Minimizes catheter kinking⁴
 - Inhibits catheter migration⁴
 - Minimizes retrograde bleeding⁴
- Exit demarcation permits reproducible cuff positioning and exit site location⁴
- Enables extension line replacement without removing indwelling catheter

OPTIMAL FLOW, CLEARANCES, AND PATENCY = OPTIMAL DIALYSIS OUTCOMES

Arrow Cannon® II Plus Catheter: Pressure vs. Flow Rate

Delivers High Flow Rates Up to 400 cc/min. at Low Pressures

Crescent-shaped distal arterial tip allows blood flow even if catheter tip rests against vessel wall.
