Coronary Diagnostic Catheters

A complete line of coronary diagnostic catheters featuring universal and radial specific shape options.

- Excellent trackability in tortuous anatomy while navigating the radial artery^{3,a}
 - Soft tip reduces potential for vessel trauma
- Superior flow rates for diagnostic imaging^{3,a}
 - Large lumen allows for high flow of contrast media and allows for downsizing of French size
- Superior torque control for precise placement^{3,a} due to double-braided stainless steel (two-ply) mesh middle layer
- Used for transradial diagnostics more than any other catheter²

Test Conditions

Solution: Glycerin 10.6 cp (equivalent to OMNIPAQUE 350 at 37°C)

Linear Rise Sec.: 1.0 sec

Total Flow Volume: 60 mL

Set Flow Rate: 30 mL/sec.

Radial-Specific Universal Shapes: Tiger, Jacky, Sarah

- Radial specific curves designed:
 - for excellent back-up support
 - with appropriate angles to fit coaxial to ostium
 - for enabling optimal engagement with simple clockwise and counterclockwise rotation¹
- Enables angiography of both RCA and LCA with a single catheter¹ that can potentially:
 - limit catheter exchanges
 - shortens procedural and fluoroscopic time¹
 - lower cost per procedure
